- According to a 2003 GAO report, the average caseload for child welfare/foster care caseworkers is 24–31 children; these high caseloads contribute to high worker turnover and insufficient services being provided to children and families. - Average turnover rates for child welfare agencies range from 20% to 40%.<sup>54</sup> Turnover rates at around 10% are considered to be optimal in any agency.<sup>55</sup>
- Caseworker turnover has negative outcomes for children in the child welfare system, including placement disruptions and increased time in out-of-home care.<sup>56</sup>

- A workload model in Colorado found that approximately 574 additional caseworkers were needed in their state to adequately provide child welfare services, due to estimated time requirements for meaningful services. This number represents a 49% increase that is needed on top of hours already spent on case related tasks.<sup>59</sup>
